

PubOOo

Convert PUB→ODP

1- Requirements :

In order to work, this software need some other programs :

- Microsoft Publisher 2003
- Microsoft .NET Framework v2.0 

2- Features :

With PubOOo you can convert Microsoft Publisher documents ('.pub ') to the free format OpenOffice.org Impress ('.odp').

About Publisher format :

Publisher format is a close format, like other formats of Microsoft Office (.doc, .xls, .ppt). But he's « more closed » than Word, Excel or PowerPoint Format because Microsoft don't want to give informations about 'pub' implementation.

So we can't imagine in a short time a direct converter (I mean without use of the Microsoft Publisher program) between 'pub' and 'odp' or 'odg' documents.

3- How it works :

PubOOo open (in an hidden window) .pub document in the software Publisher. Now he scan all the pages, in order to copy each forms to a PowerPoint document.

Finally, he convert the PowerPoint document to Impress format.

Notes

- Problem with rotated tables
- A lot of other things, I think...

5- About :

Historic :

Date	Version	Description	Auteur
02/07/2007	0.10	First release	AlicVB
13/07/2007	0.20	Graphic side	AlicVB
